

Amend Claims 11 and 12 as follows.

C2

11. (Twice Amended) A razor comprising a blade unit carrying structure on one end of which a blade unit is permanently or detachably mounted for pivotal movement relative to the carrying structure about a predetermined pivot axis extending longitudinally through the blade unit, an opposite end of the blade unit carrying structure being hingedly connected to a supporting structure, a delivery system for conducting a fluid to the blade unit from a reservoir, the delivery system including a valve for controlling supply of fluid to the blade unit, the blade unit carrying structure being coupled to the valve for the valve to be actuated by displacement of the blade unit carrying structure relative to the supporting structure caused by pressing the blade unit against the skin during shaving, and the blade unit carrying structure being resiliently biased to close the valve when the blade unit is lifted clear of the skin, and wherein the blade unit carrying structure and the supporting structure are integrally connected by at least one flexible web which defines a second pivot axis about which the blade carrying structure is pivotable relative to the supporting structure.

12. (Twice Amended) A razor blade unit carrying structure on one end of which a blade unit is permanently or detachably mounted for pivotal movement relative to the carrying structure about a predetermined pivot axis extending longitudinally through the blade unit, the carrying structure including a delivery duct for conducting a fluid supplied from a reservoir to the blade unit, an opposite end of the carrying structure being hingedly coupled to a supporting structure for a valve which is operable to control supply of fluid to the delivery duct from the reservoir to be actuated by displacement of the blade unit carrying structure relative to the supporting structure at the hinge coupling therebetween caused by pressing the blade unit against the skin during shaving, and wherein the blade unit carrying structure and the supporting structure are integrally connected by at least one flexible web

C2
which defines a second pivot axis about which the blade carrying structure is pivotable relative to the supporting structure.

Cancel Claim 14.

Amend Claim 22 as follows.

C3
22. (Twice Amended) A razor according to claim 11, wherein the blade unit carrying structure comprises a hollow stem structure extending from a flanged base, the base being engagable by a finger of a hand in which the razor is held for selectively displacing the blade unit carrying structure to actuate the valve.

Add the following claims.

C4
23. A razor according to claim 11, wherein the blade unit is supported by the blade unit carrying structure with its longitudinal axis substantially parallel to the second pivot axis defined by the web.

24. A razor according to claim 12, wherein the blade unit is supported by the blade unit carrying structure with its longitudinal axis substantially parallel to the second pivot axis defined by the web.

REMARKS

In response to the Examiner's comments, applicant submits a revised version of the Information Disclosure Statement including the required horizontal lines to indicate the class and subclass of the references are not known.

Claim 1 has been amended to incorporate the limitations previously recited in dependent Claim 4 now cancelled. Also, Claims 11 and 12 have been amended to incorporate the limitations previously recited in dependent Claim 14 now cancelled. Claim 22 has been amended to overcome the objection by the Examiner under §112 to the term "flange-like". New dependent Claims 23 and 24 have been added to define further features of the inventions recited in Claims 11 and 12. Applicant has attached a clean copy of the pending claims and copies of the previous claims which are marked to indicate the claim amendments. Claims 1-3, 5-13 and 15-24 remain pending in this application.
